

RAHUL KUMAR

Technical Lead | Java Backend Engineer | Microservices | SaaS Platform Engineering
Noida, India | 9958833292 | rahul.kumar090405@gmail.com | linkedin.com/in/rahul-java-backend | github.com/rahulkumar090405-ops

PROFESSIONAL SUMMARY

Technical Lead with 10+ years of experience designing, developing, and modernizing enterprise SaaS, travel, hospitality, e-commerce, HRMS, CRM, and education platforms. Strong expertise in Java, Spring Boot, Microservices, Struts 2 legacy modernization, Hibernate/JPA, Kafka, Redis, MySQL, REST APIs, RBAC, multi-tenant architecture, billing systems, reconciliation engines, and performance optimization. Currently leading backend architecture and a team of engineers for a large-scale monolith-to-microservices migration. Proven track record of improving report performance by ~60%, supporting 10,000+ SKUs, handling 500+ concurrent users, and processing 5,000+ financial/flight reconciliation transactions.

KEY ACHIEVEMENTS

- Improved backend report performance by ~60% using Redis caching and query optimization.
- Led a team of 5 engineers across architecture, development, code review, and sprint delivery.
- Built e-commerce backend supporting 10,000+ SKUs, dynamic pricing, orders, and transaction workflows.
- Designed and delivered ACID-compliant subscription billing and financial reconciliation modules.
- Processed and reconciled 5,000+ flight/financial transactions through automated backend workflows.
- Contributed to migration of 6+ legacy modules from Struts 2 to Spring Boot microservices.
- Designed reusable RBAC and permission architecture used across multiple enterprise modules.
- Built workflow engines where new business flows could be configured in under 1 hour without code changes.

CORE TECHNICAL SKILLS

Backend	Java 8, Java 11, Java 17, Spring Boot, Spring MVC, Hibernate, JPA, RESTful APIs, Struts 2, Servlet/JSP, Maven, Tomcat
Architecture	Microservices, Monolith-to-Microservices Migration, Multi-Tenant SaaS, RBAC, Distributed Systems, API Design, Design Patterns
Database	MySQL, Schema Design, Query Optimization, Indexing, ACID Transactions, Data Integrity, Financial Data Handling
Caching & Messaging	Redis, Apache Kafka, RabbitMQ, Event-Driven Architecture
Tools	Git, Postman, Eclipse
Security	RBAC, Authentication, Authorization, Session Management, Secure API Design, Multi-Level Approval Workflows
Leadership	Team Leadership, Sprint Planning, Code Review, Technical Mentoring, Requirement Analysis, Delivery Planning

DOMAIN EXPERTISE

SaaS Platforms • E-commerce • Fintech • Hospitality • Travel Technology • HRMS & Payroll • CRM & Lead Management • Education Management • Billing & Reconciliation • Website CMS Platforms

PROFESSIONAL EXPERIENCE

Technical Lead Jan 2026 – Present **Spysr Services Pvt. Ltd.**

Yujik SaaS Platform — Architecture Modernization

Tech Stack: Java 17, Spring Boot, Microservices, Kafka, Redis, Docker, MySQL, Tomcat

- Leading backend architecture, module design, code reviews, and sprint planning for a team of 5 engineers.
- Driving modernization of a large enterprise SaaS platform from Struts-based monolith to Spring Boot microservices.
- Designing scalable backend services for CRM, HRMS, billing, finance, reporting, e-commerce, and workflow modules.
- Implemented RBAC-based authorization model with reusable permission logic across modules.
- Designed multi-tenant backend architecture supporting multiple clients/business units from a shared platform.
- Implemented Redis-based caching for session data, RBAC permissions, and frequently accessed reports.
- Improved report loading performance by ~60% through caching, query optimization, and indexing.
- Configured multi-node deployment using Tomcat load balancing and Redis session sharing.
- Reviewing code quality, database design, API contracts, and backend performance before production releases.

Senior Software Developer *Mar 2020 – Dec 2025* **Spysr Services Pvt. Ltd.**

Yujik — E-commerce, Billing, Finance & Platform Migration

Tech Stack: *Java 11/17, Spring Boot, Hibernate, MySQL, Redis, Kafka, Struts 2*

- Built enterprise e-commerce backend from scratch: product catalog, inventory, dynamic pricing, cart, order lifecycle, and payment workflows.
- Supported product catalog scale of 10,000+ SKUs with optimized database queries and backend services.
- Designed and implemented a subscription billing module with invoice generation, payment tracking, due handling, and financial reporting.
- Built ACID-compliant transaction flows for billing, payment received, payment made, and reconciliation modules.
- Migrated multiple legacy modules from Struts 2 to Spring Boot, extracting business logic into independent services.
- Developed flight reconciliation engine to match booking records with financial transactions (5,000+ records processed).
- Built configurable workflow engines for approval, finance, task, and business process automation.
- Improved maintainability by separating controller, service, DAO/repository, helper, and utility layers.

Software Developer *May 2018 – Feb 2020* **Spysr Services Pvt. Ltd.**

Yujik — HRMS, CRM, Bug Tracker, Expense Management & CMS

Tech Stack: *Java 8, Struts 2, Hibernate, MySQL, AJAX, Tomcat*

- Built HRMS modules for employee management, payroll computation, attendance, and compliance tracking.
- Developed sales CRM with lead capture, pipeline tracking, follow-ups, and conversion workflows.
- Built bug and issue tracking system with assignment, priority, status, and resolution workflows.
- Developed expense management module with multi-level approval and financial reporting.
- Created website CMS for dynamic website creation, content publishing, menus, pages, and media.

Junior Software Developer *Mar 2016 – Apr 2018* **Spysr Services Pvt. Ltd.**

Yujik — Hotel Management & Tour Management

Tech Stack: *Java 8, Struts 2, Hibernate, MySQL, Tomcat*

- Built hotel management modules: room inventory, booking engine, dynamic pricing, and housekeeping tracking.
- Developed tour management system for package creation, itinerary planning, booking, and automation.
- Helped reduce manual operations by ~40% through backend workflow automation.
- Contributed to centralized RBAC and permission design used across multiple platform modules.

CLIENT & FREELANCE PROJECTS

Dice Empire FX — UK-Based Fintech Product 2024

Tech Stack: *PHP, Laravel, MySQL, React Native*

- Built backend APIs for a fintech application supporting mobile app integration.
- Designed authentication flow, user management, and database schema for financial operations.
- Developed REST APIs for transaction-related business workflows and React Native mobile app integration.

Tayyarah CRM — Travel & Finance Reconciliation 2023

Tech Stack: *Java, Struts 2, Hibernate, MySQL*

- Built flight reconciliation module to match bookings, supplier records, and payment transactions.
- Implemented payment received/made features and reporting logic for operational finance teams.
- Improved manual reconciliation accuracy by introducing automated backend matching workflows.

The Lalit Hotels — Website CMS & Housing Management 2022–2023

Tech Stack: *Java, Struts 2, Hibernate, MySQL*

- Developed backend CMS for hotel website content, rooms, promotions, and page management.
- Built housing management system for staff accommodation allocation and occupancy tracking.
- Created admin-side modules for hospitality operations and content management.

Plan My Booking — Saudi Arabia Travel Platform 2021

Tech Stack: *Java, Hibernate, MySQL*

- Developed backend modules for booking CMS, inventory handling, pricing, and content management.

Quizboat — Education Management CRM 2018–2020

Tech Stack: *Java, Struts 2, Hibernate, MySQL, AJAX*

- Built school management, quiz management, library management, attendance, and academic CRM modules.

EDUCATION

Bachelor of Technology — Computer Science Engineering 2011 – 2015

APJ Abdul Kalam Technological University

AI-ASSISTED DEVELOPMENT

Uses AI-assisted development tools for code review, backend automation, documentation, and productivity improvement. Applies AI workflows for faster API design, migration planning, technical documentation, and repetitive code generation. Exploring AI-assisted modernization for converting legacy Java/Struts modules into Spring Boot-based architecture.
